

Your Choices

**Your Electronic  
Patient Record &  
Sharing of  
Information**

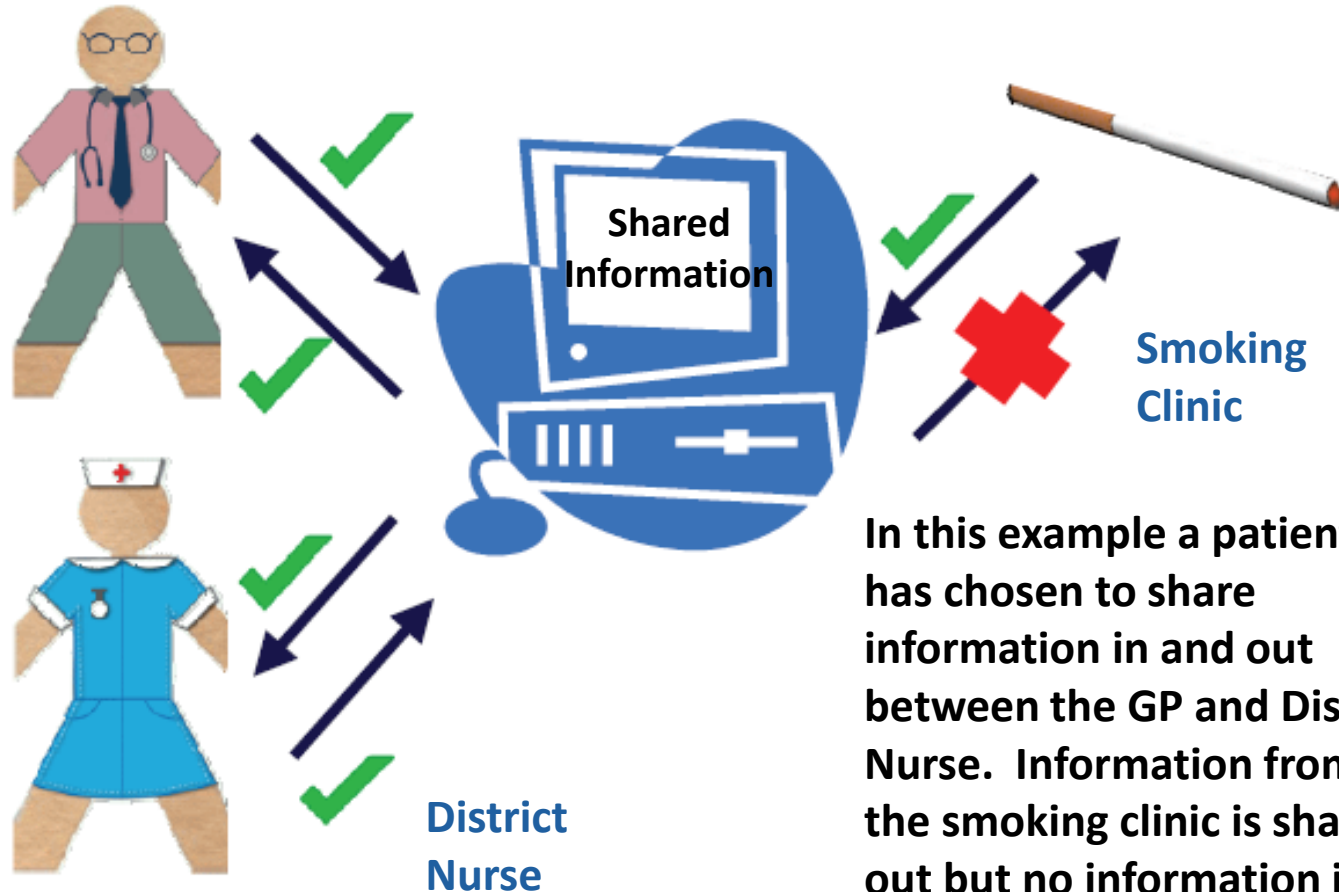

When you see NHS staff, information is recorded about your visit on their computer system.

You can choose to share your information with other NHS services that you are being seen by that use the same computer system.

# You can choose to share your information from here out to other services

GP

In this example a patient has chosen to share information in and out between the GP and District Nurse. Information from the smoking clinic is shared out but no information is shared in.

You can make your information sharable to other services but choose to hide certain sensitive parts of your record. This then won't be shared with services other than the one that recorded it.

You decide as and when you see other services if you would like to share your information at that time.

## Some of the services that you may choose to share with:

- » **Some GP Practices – including if you register as a temporary resident whilst on holiday**
- » **Services for children & families such as Health Visiting, School Nursing, Speech & Language Therapy and Specialist Children's Services etc**
- » **Community Nursing, Therapies**
- » **End of Life and Palliative Care Services**
- » **Walk in Centres and Acute GP Services**
- » **A&E and Urgent Care Services**

You can pick up a leaflet 'A patient's guide' at reception or see our website for more information
